DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 31-59 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-30 of U.S. Patent No. 6,703,625. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both describe reflecting input light

Art Unit: 2883

having an on-axis illumination pattern off of two objectives to create output light having an off-axis illumination pattern.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claim is rejected under 35 U.S.C. 102(e) as being anticipated by Ota, U.S. Patent 6,485,153. Regarding independent claim 1, Ota teaches a lithographic illumination shaping device comprising a first reflecting objective (Fig 1, ref sign M1), including an input end arranged to accept input light having an on axis illumination pattern (Fig 1, ref sign R is the reticle) the first reflecting objective including a first reflective surface arranged to reflect the input light and a second reflecting objective including an output end (Fig 1, ref sign M4), the second reflecting objective further including a second reflective surface arranged to receive the input light from the first reflective surface (Fig 1), and further arranged to reflect the input light through the output end as output light having an off-axis illumination pattern.

Application/Control Number: 10/728,404

Conclusion

Page 4

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents 6,109,756 to Takahashi describes an optical system for fabricating semiconductor devices. However, it is silent with respect to the use of reflectors as described in the claims to produce off-axis illumination patterns. U.S. Patent 6,525,806 to Smith describes several prior art illumination images (annular and multipole) but is also silent with respect to the use of reflectors as described in the claims to produce off-axis illumination patterns.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Kalivoda whose telephone number is (571) 272-2476. The examiner can normally be reached on Monday - Friday (8:30 - 5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on (571) 272-2415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

7. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

Art Unit: 2883

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
